PROJECTS

Data Anonymization using Python

2024

Developed a Python-based utility to anonymize sensitive data for privacy-preserving analytics. Implemented data masking and sanitization workflows for datasets.

- Used Python libraries (**Pandas**, **NumPy**) to parse, transform, and anonymize structured data efficiently.
- Ensured personally identifiable information (PII) was obscured before sharing or analysis.

File Organizer for Unix Systems

2024

Built an automated file-organization script for Unix-based systems to sort and manage files based on extension/type.

- Leveraged Shell scripting / Python to classify and move files into logical folders, improving workflow hygiene.
- Reduced manual cleanup effort and improved productivity in development environments.
